

Forty-five years ago the residents of Valley County had the vision to plan for medical care for future generations. We who have lived here and benefited from the decision now have the opportunity to pass on advanced care in the medical field for future generations.

The present building while serviceable is no longer adequate for new medical technology. Space in the present building has been stretched to the limit. Just as our homes have been added on, remodeled and replacements made, it would still lack the advancements in efficiency.

Take a good look at the Mortensen Family Industrial Site northwest of Ord. A nucleus of young adults has invested in construction and growing businesses there and more are in the plans. Attend meetings in your towns and you will probably see young adults taking an active part.

A new medical facility will expand our health care and lead to more and better paying jobs. We can do this now by voting FOR the hospital bond on May 13. No tax monies will be used to retire the debt as hospital revenues and reimbursements from Medicare will be sufficient to do so.
